

**AMENDMENTS TO THE SPECIFICATION:**

Please amend the paragraph bridging pages 3 and 4 of the specification as follows:

Referring now to Fig. 1, support frame 2 includes main frame 4, which forms an outer periphery that defines an opening 5. In addition, support frame 2 includes and crossing members 6 and 8 which bridge the opening 5 in the main frame 4. Crossing member supports 10 provide stability where crossing members 6 and 8 contact the frame 4. It is preferable for the support frame 2 to be a one-piece frame, however, frame 4 and crossing members 6 and 8 may be manufactured separately, assembled in two or more pieces and then welded together by a plastic or metal welding process.

**AMENDMENTS TO THE DRAWINGS:**

As illustrated in the annotated copy of revised drawing Figure 1 presented in the Appendix to this Amendment, reference numeral 4 has been added to identify each side of the outer periphery of the main frame. In addition, reference numeral 5 has been added to identify the opening defined by the main frame.
